

Standard - Tropical

Why is Chip ice so outstanding?

- **0,5°C ice temperature stands for:**
- Quick and long lasting** cooling effect.
- No damage** due to freeze burn of the goods.
- No freezing together** or lumping of the ice.
- Suitable for **all day storage**.
- High cooling effect** and energy efficiency.

Standardice
The mix of small and large ice particles guarantees a high degree of cooling with good storage capability – ideal for the bowl chopper and for process cooling.

Superior method:

- Closed water system = **better hygiene**
- Static evaporator = **no refrigerant leaks**
- Robust construction = **reliable**

MacroIce

Pieces of ice up to 9.5 mm thick. It is particularly good for lengthy storage and is excellent for cooling over long periods of time e.g. for transporting fish and for retail displays.

MicroIce

MicroIce consists of small ice pieces with an average size of approximately 5 mm. It mixes well, dissolves and cools rapidly. MicroIce is the most appropriate one for mixing processes and for delicate goods such as fish fillets.

Compact, plug-in units

Type	20°-version			35°-version
